

Hiperbaric is an innovative industrial organization, exclusively dedicated to high pressure processing technology (HPP) for the food industry since 1999.

This company has an **annual turnover of 48.557.000 €**, and his economic profitability ration has been growing since 2010 by 2% each year. So as an investor, you will be getting a secure dividend by the end of the year.

This industry, born in Burgos, is a pioneer in an innovative sector. It will generate a growing demand in the coming years, which is why the company is actively seeking investors for its I+D+I projects.

Why this High Pressure Technology will be on growing demand on the upcoming years?

- Pathogen destruction (Listeria, Salmonella, Vibrio, Norovirus, etc.): Food safety and access to export markets.
- Increases product shelf life: Lower returns and refunds, better production and logistics organization.
- Retains the characteristics of the fresh product: sensory and nutritional properties remain intact: Higher product quality.
- Avoids or reduces the need for preservatives: Natural" seal (natural/organic/no additives).
- New innovative proposals. Products impossible to create before because they cannot be heat treated, can now be processed by high pressure: Innovation and competitive advantage.
- Requires only water (recycled) and electricity: Environmentally friendly.

In addition, the company plans to expand its international presence. In the European market it has its headquarters in Burgos, in the United States it has its headquarters in Miami and **you can be the investor who facilitates the headquarters in the Asian continent.**
